

New Surface System® 100 Broad Profile for MAP Systems.
The newest addition to the Marlite MAP Systems.

System 100 Broad Profile creates a full 1" division between panels that, when combined with the Narrow, Channel & Hidden reveal details, adds a team of new combinations.. Used vertically, horizontally or in a grid, this deep, dramatic element is beyond just a detail. Intended for visual impact, it expands the envelope of your design statement and aesthetic possibilities to a whole new level.

And, now with the addition of Channel Fillets for the System 100 Hardware, design possibilities for your MAP System installation are virtually endless. Developed to coordinate, contrast or accent your panel selection and provide that "extra element" to transform any installation into your signature design, Channel Fillets are factory installed inserts that you can specify in a nearly unlimited range of wood, laminate and custom material finishes.
